FINANCIAL PERFORMANCE DASHBOARD

Sales and Profit Analysis across Products, Countries, and Discount Bands .

Prepared by :- Tanmay Chavan
Role :- Business Analyst Project.

*Project Overview :-

The objective of this project is to analyze financial performance data to:

- Evaluate Sales and Profit trends
- Understand the impact of Discounts on Gross Sales
- Compare performance across Countries and Products
- Identify high-performing segments and optimization opportunities

*Dataset Overview:-

The dataset contains transactional-level financial data including:

- Date (2013–2014)
- Country (Canada, France, Germany, Mexico, United States)
- Product (Amarilla, Carretera, Montana, Paseo, Velo, VTT)
- Segment (Enterprise, Government, Small Business, etc.)
- Sales
- Gross Sales
- Profit
- Discount Band
- Discounts

Key Calculated Fields:

- Total Sales = Sum of Sales
- Total Profit = Sum of Profit
- Profit Margin = Profit / Sales
- Aggregations by Product, Country, Discount Band & Time

*KPI Cards :-

Section	Values
Total Sales	$118726350.3
Total Profit	$16893702.25
Average Profit Margin	0.142291094 %
Top Performing Country (based on total sales)	United States of America
Top Performing Product (based on total sales)	Paseo

*Insights from bar chart (Sales & Profit by Country):-

- United States is the top revenue contributor, generating the highest total sales among all countries.
- Canada is the second strongest market, showing consistently high sales performance.
- Mexico has the lowest total sales, indicating potential growth opportunity or weaker market penetration.
- France and Germany are mid-performing markets, but their profit margins appear stronger compared to some higher-sales countries.
- High sales does not always mean highest margin — some countries with lower revenue show relatively better profitability efficiency.

*Insights from line chart (Sales & Profit Trend Over Time :-

- Overall upward trend from 2013 to 2014, indicating business growth year-over-year.
- Significant spike in late 2014 (Nov–Dec), suggesting seasonal impact or strong year-end performance.
- Enterprise segment contributes the largest portion of sales across both years.
- Government segment remains relatively stable, with moderate fluctuations.
- Profit trend follows sales trend closely, indicating controlled cost structure and stable margins.

*Insights from Scatter Plot chart (Gross Sales vs Discounts :-

- There is a positive relationship between discounts and gross sales.As discount values increase, gross sales generally tend to increase, indicating promotions drive higher revenue volume.
- Higher discounts are associated with higher gross sales clusters.The top-right region (high discount + high sales) shows strong performance, especially for certain products.
- Amarilla appears to benefit the most from higher discounts.Its data points are concentrated in higher discount and higher gross sales areas, showing price sensitivity.
- Some products generate strong sales even at moderate discounts.Carretera and Montana show good gross sales without requiring extreme discounting, suggesting stronger inherent demand.
- Large bubbles (higher sales volume) are mostly seen at mid-to-high discount levels.This suggests discount strategies significantly impact sales volume performance.

*Insights from Heat Map chart (Sales by Product & Discount Band :-

- Moderate discounts (0–10% and 10–20%) generate the highest sales overall.Most products show darker shades in these bands, indicating strong customer response to small discounts.
- Extreme discounts (30–40% and 40–50%) do not consistently increase sales.For several products, sales drop in higher discount bands — meaning heavy discounting doesn't always drive volume.
- Carretera performs exceptionally well at low discount levels.It shows very strong sales at 0% and 0–10%, suggesting strong brand/product demand without needing heavy discounts.
- Amarilla shows peak performance at 30–40% discount.Unlike other products, Amarilla responds strongly to higher discounting, indicating price sensitivity.
- VTT and Montana show relatively stable but moderate performance across bands.Their sales are more evenly distributed, meaning discount strategy has limited impact compared to premium products.

*Project Conclusion :-

- Sales are steadily growing over time, with noticeable peaks in late 2014, indicating improving business performance.
- United States is the top-performing country, contributing the highest overall sales.
- Moderate discounts (0–20%) drive the most effective sales growth, while heavy discounting does not consistently increase performance.
- Discount impact varies by product — some products (like Amarilla) respond strongly to higher discounts, while others perform well with minimal discounts.
- A product-specific and controlled discount strategy is recommended to maximize sales without sacrificing profit margins.
